

Validation Guidance Documents

Shiny and R Markdown

RStudio packages for web applications and reporting

tidyverse, tidymodels, r-lib, gt

RStudio affiliated analysis packages that share validated design principles and practices

RStudio Team

The premiere software bundle for data science teams

Validation Guidance Documents

Shiny and R Markdown

RStudio packages for web applications and reporting

tidyverse, tidymodels, r-lib, gt

RStudio affiliated analysis packages that share validated design principles and practices

RStudio Team

The premiere software bundle for data science teams

- Know your audience?
- Based on the R core validation guidance, peer reviewed by some of you and RStudio's engineers
- Goal is to position some packages as trusted sources

Validation Guidance Documents

Shiny and R Markdown

RStudio packages for web applications and reporting

tidyverse, tidymodels, r-lib, gt

RStudio affiliated analysis packages that share validated design principles and practices

RStudio Team

The premiere software bundle for data science teams

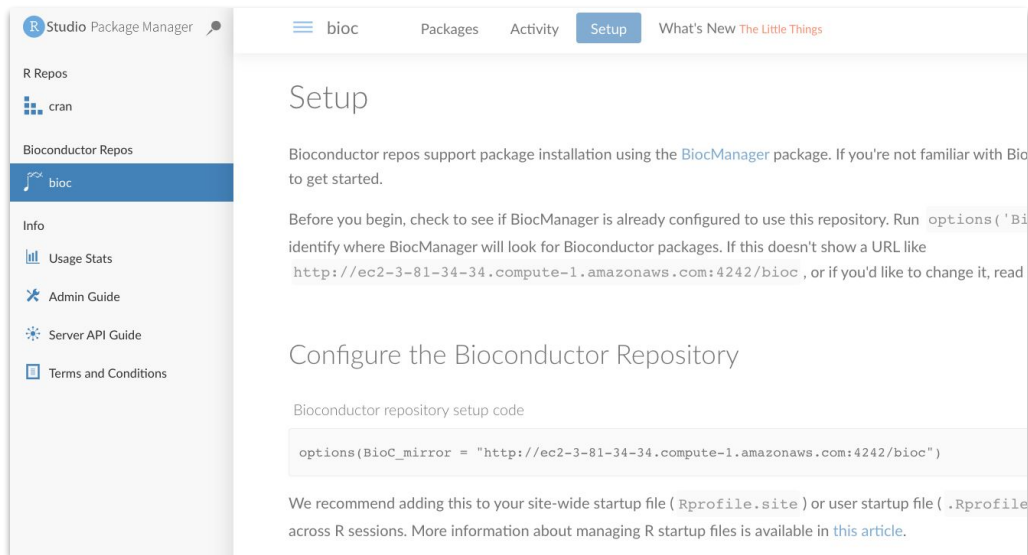

- Know your audience?
- Based on the R core validation guidance, peer reviewed by some of you and RStudio's engineers
- Goal is to position some packages as trusted sources
- And emphasize the benefits of open source software for trustworthy and reproducible science

Bioconductor Support in RStudio Package Manager

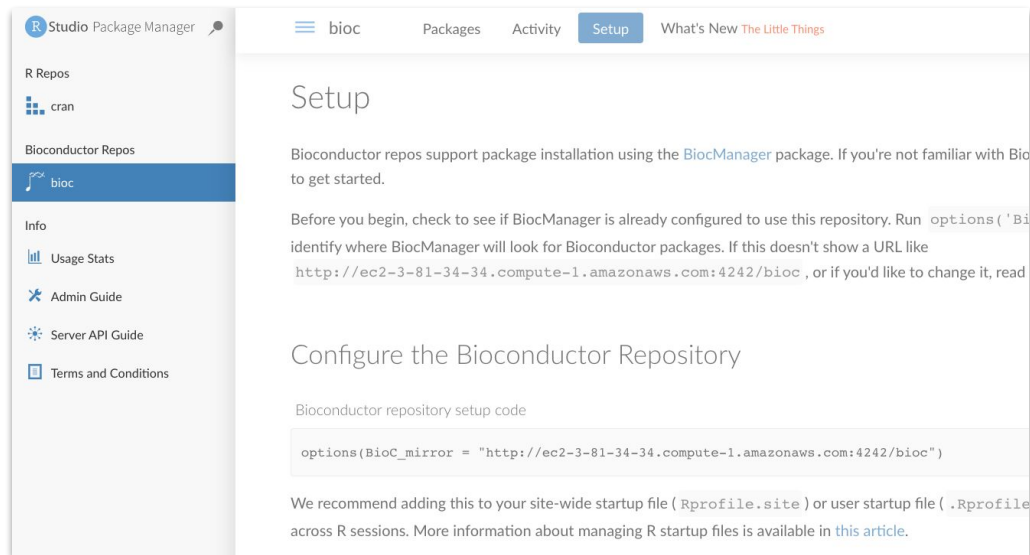

- Offline or controlled access to Bioconductor

Bioconductor Support in RStudio Package Manager

- Offline or controlled access to Bioconductor
- Compatible with BiocManager or `install.packages`

Bioconductor Support in RStudio Package Manager

- Offline or controlled access to Bioconductor
- Compatible with BiocManager or `install.packages`
- Rectifies the tension between Bioc Releases & CRAN's rolling updates

RTF support in gt

```
19 kable <- gt(data, groupname_col = "group") %>%
20   fmt(
21     rows = group == "Completed",
22     columns = c("Placebo", "Low Dose", "High Dose", "Total"),
23     fns = function(x) {sprintf("%d (%g%%)", x, round(x/254*100,0))}
24   ) %>%
25   summary_rows(
26     groups = c("Early Termination"),
27     columns = c("Placebo", "Low Dose", "High Dose", "Total"),
28     fns = list(
29       `Total` = ~sum(., na.rm = TRUE)
30     ),
31     formatter = fmt_number,
32     decimals = 0
33   ) %>%
34   grand_summary_rows(
35     columns = c("Placebo", "Low Dose", "High Dose", "Total"),
